142. (CURRENTLY AMENDED)   A recording and/or reproducing method comprising:

recording and/or reproducing real time files requiring real time recording and/or reproduction on a recording medium according to real time recording and/or reproduction information for ensuring real time reproduction; and

recording and/or reproducing the real time recording and/or reproduction information in a file type field in an (ICB) TAG field of a file entry for a universal disk format (UDF) system.

143-148. (PREVIOUSLY CANCELLED)

149. (NEW) The recording and/or reproducing method of claim 142, further comprising reproducing the real time files using the real time recording and/or reproduction information.

150. (NEW) The recording and/or reproducing method of claim 142, wherein the recording and/or reproducing the recording and/or reproducing information comprises storing the real time recording/reproduction information in corresponding ones of the real time files.

151. (NEW) The recording and/or reproducing method of claim 142, wherein the real time recording/reproduction information includes file indication information indicating that the real time files require real time recording and/or reproduction.

152. (NEW) The recording and/or reproducing method of claim 142, wherein the real time recording/reproduction information includes at least one of:

recording/reproduction bit rate information,

information on minimum contiguous storage clocks satisfying a condition in which a playback time of a current data block is greater than a sum of a seek time and a read time of a data block to be played back next, and

information on a play back time for ensuring minimum contiguous storage.

153. (NEW) The recording and/or reproducing method of claim 149, wherein the recording and/or reproducing the real time files comprises:

reading a volume area on the recording medium; and

reproducing a file as one of the real time files in accordance with the real time recording and/or reproduction information.

154. (NEW) The recording and/or reproducing method of claim 153, wherein the reproducing of the file comprises analyzing recording/reproduction bit rate information, defect management information, file allocation information, and file buffering information according to the real time recording and/or reproduction information.

155. (NEW) A recording and/or reproducing method comprising recording and/or reproducing real time files requiring real time recording and/or reproduction on a recording medium according to real time recording and/or reproduction information for ensuring real time reproduction, wherein the real time recording and/or reproduction information includes a size of minimum contiguous storage blocks.
